EXPERIENCE

Software Development Intern — YesCity *Mar 2026 – May 2026*
Remote

- Developed an API-based discount feature for premium subscriptions using coupon codes integrated with Razorpay, enabling dynamic pricing workflows.
- Automated coupon validation and discount calculation logic based on configurable business rules, reducing manual pricing errors.
- Built an automated data ingestion pipeline (web scraping and third-party APIs) feeding the research team's itinerary and RCM engine, improving data-structuring efficiency.

PROJECTS

Chest X-Ray Disease Detection *AUC: 0.75* [GitHub ↗](#)
DenseNet-121, RAG, LLM, Agentic AI, Docker

- Fine-tuned DenseNet-121 DL model on the NIH ChestX-ray14 dataset for multi-label classification across 14 chest diseases.
- Integrated a RAG pipeline with a Groq LLM to auto-generate explainable diagnostic summaries from model predictions.
- Engineered Grad-CAM visualizations for interpretability and designed an agentic AI layer to orchestrate inference, retrieval, and report generation; containerized with Docker.

Intelligent Incident Detection and Prediction System [GitHub ↗](#)
Precision: 0.99
ML/DL, CrewAI, Ollama

- Built a real-time incident detection and prediction pipeline using Random Forest and Transformer-based models.
- Designed a multi-agent workflow with CrewAI integrated with Ollama to generate root-cause analysis and incident explanations.
- Reduced manual monitoring effort by 70–80% through proactive, automated incident prediction and reporting.

Secure Real-Time Walkie-Talkie System [GitHub ↗](#)
WebRTC, Node.js, Socket.IO

- Designed a real-time voice communication application using WebRTC and UDP for low-latency peer-to-peer audio transmission.
- Built a Node.js signaling server using Socket.IO to exchange SDP offers, answers, and ICE candidates.
- Integrated STUN/ICE-based NAT traversal and DTLS-SRTP encryption to ensure secure communication.

Mobile Device Management [GitHub ↗](#)
Java, Spring Boot

- Built an MDM system to automate device registration, version rollout, and update status tracking.
- Implemented REST APIs, region-based update scheduling, and audit logging using JPA and H2 database.
- Designed scalable service architecture supporting concurrent device management across multiple network segments, with structured error handling and status reporting.

EDUCATION

B.Tech. in Computer Science & Engineering
Jaypee Institute of Information Technology, Noida
2023 – 2027
CGPA: 8.4

Class XII — PCM + CS
Lovely Public Senior Secondary School, Delhi
2022
90.4%

ACHIEVEMENTS

- Solved 600+ DSA problems across LeetCode, GeeksforGeeks & CodeChef
- Senior Advisor, IIIT Knuth Programming Hub (KPH) Technical Core Team
- Semi-finalist, Code4Cause 2.0 Hackathon, NSUT Delhi (2024)
- Completed Full Stack Web Dev (Angela Yu, Udemy); pursuing AI/ML (Kris Naik); completed "Intro to Python" on edX

SKILLS & STRENGTHS

Python	C++
Java	JavaScript
React.js	Node.js
Express.js	FastAPI
Agentic AI	Gen AI
PyTorch	CNN
ML/DL Models	LangChain
RAG	EDA
APIs	Docker
Linux	Git
GitHub	PostgreSQL
MySQL	Google Auth

Core Subjects
DSA, OOP, DBMS, Operating Systems, Computer Networks, Distributed Systems fundamentals, Computer Security

ABOUT ME

Final-year Computer Science student with a strong foundation in Data Structures & Algorithms, backend engineering, and AI/ML systems — including agentic pipelines, real-time inference, and explainable ML.

Interested in building first-principles systems at the intersection of AI, real-time infrastructure, and large-scale platforms.

Always eager to learn, contribute, and grow with the team.
